

LANCOM 1800VA-5G

SD-WAN gateway with VDSL and 5G

Secure, flexible, highly available – this is what site networking via SD-WAN can look like for your medium-sized branch infrastructures. With parallel support for multiple Internet lines via VDSL, fiber, and 5G, the LANCOM 1800VA-5G ensures the best connection quality for your business-critical applications. Thanks to 5G, intelligent backup scenarios or primary operation with low latencies for real-time applications are no longer a future scenario. By increasing the bandwidths provided, you can securely connect mobile employees and sites to your headquarters with LANCOM IPsec VPN, even with higher data volumes. With just a few clicks, you can integrate the LANCOM 1800VA-5G into the LANCOM Management Cloud (LMC) and centralize, automate, and accelerate your network management.

- SD-WAN – incl. zero-touch deployment and Auto-VPN via the LANCOM Management Cloud
- Integrated VDSL Supervectoring modem for up to 300 Mbps
- High-speed Internet via fiber optics (GPON and AON modules available separately) and Gigabit Ethernet for connection of external modems
- Load balancing for the active/active operation of several Internet access lines and maximization of the available bandwidth
- Integrated 5G modem for primary operation via 4G/5G or in parallel with other access types for low latency and high bandwidth for real-time applications (video streaming, telephony or AR)

LANCOM 1800VA-5G

LANCOM SD-WAN – Next-level networking

With LANCOM SD-WAN you can manage and monitor your entire corporate network centrally, cost-effectively, quickly, and stress-free! In combination with the LANCOM Management Cloud, the SD-WAN gateway gives you all the options for an automated setup of secure VPN connections (Auto-VPN) between sites, including network virtualization. Highlight features such as High Scalability VPN (HSVPN) and Advanced Mesh VPN offer you a significant plus in scalability and efficiency for a large number of branches and applications. Furthermore, if multiple WAN connections are defined, they are automatically operated in active/active mode (load balancing), thereby increasing the available total bandwidth. With Dynamic Path Selection and Dynamic Traffic Steering, applications are also dynamically routed via the best connection at any given time.

WAN connectivity with VDSL Supervectoring

The LANCOM 1800VA-5G offers full VDSL Supervectoring support and is also backwards compatible with VDSL2 and ADSL2+. Data rates of up to 300 Mbps are possible on existing copper lines.

Fully future-proof with 5G

Thanks to high-performance 5G technology, the LANCOM 1800VA-5G is ideal for intelligent backup scenarios, primary operation, or parallel operation in active/active mode with other access types. Highest availability and best bandwidths for the use of real-time applications such as video streaming or augmented reality (AR) in combination with lowest latencies make the branch router the ideal node in environments with high data traffic.

Modern housing with focus on sustainability

Innovative technology meets forward-looking optics: the combination of matte black plastic and mirror-like acrylic glass front panel for interface information conveys a tangible feeling of security, reliability, and high quality. The housing of the SD-WAN branch router offers high installation flexibility thanks to possible table, rack, and wall mounting. Local production ensures short procurement routes with low CO2 emissions and thus scores particularly well in terms of sustainability.

Security with stateful inspection firewall, VLAN, and ARF

Equipped with a stateful inspection firewall, the LANCOM SD-WAN gateway protects the entire network with functions such as intrusion prevention and denial of service protection. Logical network segmentation allows you to define individual security settings and access rights according to the requirements of the user groups, and to divide your infrastructures and applications into different areas. This network segmentation using ARF (Advanced Routing and Forwarding) and VLAN (Virtual Local Area Network) ensures that your enterprise network as a whole remains protected, even if a network segment is compromised. Learn more in the Techpaper: Advanced Routing and Forwarding.
